INTERPRETATION OF RESULTS and NORMED SCORES

Pencil and paper tests are of just one way of obtaining a measure of a child's progress in any subject area. All testing is subject to extraneous influences such as how the child feels on test day. Teachers are encouraged to compare the results for each child on this test with their own estimate of that child's ability. Where these are very different, investigation may be warranted to see if other factors were involved.

Stanine	Scores achieved by:	General Interpretation
1	lowest 4% of group tested	Extremely Poor
2	next 7%	Well Below Average
3	next 12%	Below Average
4	next 17%	Low Average
5	middle 20% = Test Average	Average
6	next 17%	High Average
7	next 12%	Above Average
8	next 7%	Well Above Average
9	top 4% of group tested	Outstanding

A **percentile** is a finer measure than a stanine. It tells you the percentage of the group tested whose scores fall BELOW that score. For example, if a score is in the 86th percentile, it is higher than 86% of the other scores. These scores are generally used to rank and compare larger groups.

The best guide to comparative achievement at the individual child level within a year group is the **Total Score** for each child.

The best guide as to how a particular child's achievement level compares to many other children of that year level, is that child's **Stanine Score**.

The best guide as to how the class achievement level compares to many other students of that year level is the **Average Stanine** for the class.
